Education

University of California, Santa Cruz

Expected June 2027

B.S. Computer Science

Santa Cruz, CA

Relevant Coursework: Principles of Computer Systems Design, Computer Architecture, Computer Systems & C Programming, Data Structures & Algorithms, Engineering Principles of Electronics

Technical Skills

Languages: C, C++, Python, TypeScript, JavaScript, SQL

Systems/Backend: Linux, POSIX file I/O, pthreads, concurrency, synchronization, HTTP, REST APIs, PostgreSQL, Redis

Frameworks/Tools: Fastify, Next.js, React, Prisma, Docker, Git, OpenAPI, Postman

Experience

Lavner Education – STEM Instructor

Jun 2026 – Aug 2026

Camp Tech Revolution at UCLA

Los Angeles, CA

- Delivered hands-on programming and STEM instruction to elementary and middle school students in classroom and one-on-one settings, including Python and game-development concepts.
- Set up and maintained classroom computers, software, and network connectivity; troubleshoot technical issues for students and staff to keep daily instruction running.
- Led classes in a fast-paced environment, coordinated with site staff, communicated technical issues, and supported equipment inventory and tracking.

FutureProof Labs – Operations Intern, AI Program Strategy & Execution

Oct 2024 – Nov 2024

California, United States

- Supported operations for an AI-focused hackathon centered on agentic workflows and Retrieval-Augmented Generation (RAG).
- Collaborated with teams rapidly prototyping AI-powered applications using LLMs, automation tools, and modern software workflows.

Projects

Concurrent HTTP/1.1 Server

C, pthreads, POSIX, Linux

- Built a multithreaded HTTP/1.1 server in C with a configurable pthread worker pool and bounded work queue to process concurrent client connections.
- Designed URI-scoped reader-writer synchronization with a hash-indexed lock registry, allowing concurrent reads while serializing conflicting writes to shared resources.
- Implemented GET/PUT handling, POSIX file operations, HTTP error responses, and mutex-protected audit logging for deterministic concurrent request tracking.

CleanTheStreets – Team Civic Reporting Platform

Next.js, TypeScript, Prisma, PostgreSQL

- Collaborated on a team-built platform for reporting potholes and roadway damage through location-based user submissions.
- Developed backend functionality and data models to store, categorize, and retrieve structured infrastructure reports through application APIs.
- Coordinated backend interfaces and submission workflows with teammates, contributing to an end-to-end system spanning the database, API layer, and user-facing application.

Micro-Fiverr – Full-Stack Marketplace

Next.js, TypeScript, Prisma, PostgreSQL

- Developed a full-stack marketplace with authenticated user flows, service listings, protected routes, and REST-backed application workflows.
- Designed a relational PostgreSQL schema and backend APIs supporting users, listings, reviews, and marketplace interactions.

Honors

Dean's Honors – University of California, Santa Cruz

Fall 2023
