Education

University of California Santa Cruz
Computer Science (B.S.)

June 2027
Santa Cruz, CA

- GPA: 3.28 / 4.00
- Relevant Coursework: Data Structs & Algs, Prin Comp Sys Dsgn, Computer Architect, Discrete Math

Technical Skills

Languages: Python, JavaScript, TypeScript, C, C++, SQL (MySQL, PostgreSQL), HTML, CSS, Bash

Tools/Platforms: Git, GitHub, Docker, Redis, Linux, Postman, GitLab CLI

Libraries/Frameworks: Fastify, Next.js, React, Tailwind CSS, Prisma ORM, NextAuth.js, OpenAPI

Experience

FutureProof Labs

Oct 2024 – Nov 2024

Operations Intern (AI Program Strategy and Execution) California, United States

- Supported operations for the SOLD OUT Agentic RAG-A-Thon hackathon with \$12K in prizes, coordinating logistics and helping facilitate collaboration between developers, entrepreneurs, and AI practitioners.
- Assisted with event organization, participant coordination, and operational execution to ensure smooth event delivery.
- Worked closely with teams building AI applications using Retrieval-Augmented Generation (RAG) systems and modern AI tooling.

Staples

Jun 2023 – Sep 2023

Sales Associate Torrance, California

- Assisted customers with product selection and technical questions while maintaining a high level of customer service in a fast-paced retail environment.
- Managed cashier operations, inventory organization, and merchandising to support daily store operations.
- Resolved customer issues quickly and efficiently, improving the overall in-store experience.

Projects

Urban Safety Platform — Location-based civic issue reporting platform (Team Project)

- Collaborated in a team of three to develop a web platform that allows users to report potholes and street hazards using location-based submissions.
- Designed a PostgreSQL-backed data model for storing geolocated infrastructure reports and tracking issue status.
- Developed RESTful API endpoints for report creation, retrieval, and status updates.
- Implemented an interface for browsing community-reported issues and identifying problem areas.

Stack: Next.js, TypeScript, PostgreSQL, Tailwind CSS

Micro-Fiverr — Full-stack freelance marketplace web app

In-Progress

- Built a full-stack marketplace platform where users can create service listings, browse gigs, and leave reviews.
- Implemented secure user authentication with protected routes and credential-based login.
- Designed a relational PostgreSQL database schema for users, gigs, reviews, and marketplace interactions.
- Developed RESTful API routes for gig creation, account registration, and dynamic data retrieval.

Stack: Next.js, TypeScript, Tailwind CSS, Prisma, PostgreSQL, NextAuth.js

Weather API Service — Production-style weather data backend

In-Progress

- Built a scalable REST API for weather data retrieval using Fastify and TypeScript.

- Implemented API key authentication with secure hashing, key revocation, and protected routes.
- Integrated a third-party weather provider and created a service abstraction layer to normalize external data.
- Added Redis caching and request logging to improve performance and enable usage analytics.
- Designed PostgreSQL database schema for API keys, request logs, and location queries.

Stack: Fastify, TypeScript, PostgreSQL, Redis, Docker, OpenAPI

Honors

Dean's Honor List — University of California Santa Cruz

Fall 2023
